

Liquid Concepts Aqua Pro

Introducing Aqua Pro Tanks

Introducing the Aqua Pro hydrographics tank, your ultimate solution for water transfer printing needs, exclusively available at Liquid Concepts! This top-of-the-line tank offers unparalleled performance and design, all at an affordable price point.

At the core of the Aqua Pro lies a robust recirculation pump, ensuring constant water circulation for optimal results. Its advanced heating elements allow precise temperature control, providing consistent and reliable outcomes with each project. The tank's mobility is enhanced by casters with built-in locks, while leveling feet ensure stability during the printing process.

Crafted with high-quality stainless steel piping, the Aqua Pro is built to last, offering exceptional resistance to corrosion and wear. Cleanup is a breeze thanks to its convenient drain valves, and the enclosed pump area ensures safety and a tidy workspace. For precise film containment, film dividers are included, eliminating waste and boosting efficiency.

We're confident in the Aqua Pro's reliability, which is why it comes with a 1-year warranty. With its stainless steel body, the tank is engineered to withstand continuous use, making it the perfect investment for your water transfer printing endeavors.

Each of our Aqua Pro tanks are made to order and have an estimated completion time of 2-3 months from the time order is placed.

TANK FEATURES

SOLID FOUNDATION

Casters with Lock and Leveling Feet

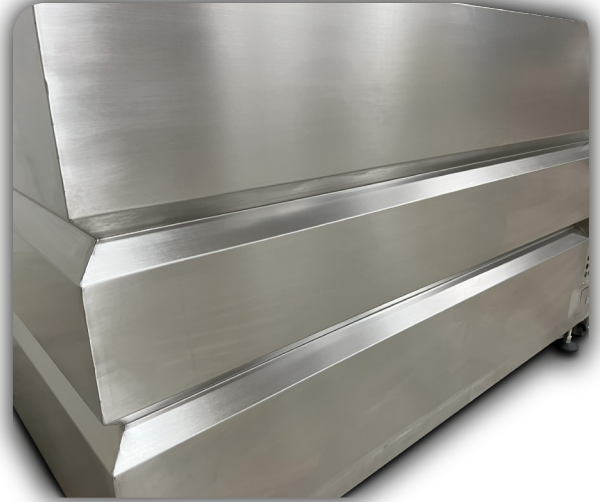

Mobility and stability are key features of the Aqua Pro hydrographics tank. The casters with built-in locks allow for easy transportation and positioning of the tank, ensuring convenience and flexibility in any workspace. Additionally, the leveling feet provide stability, helping to create a level surface for optimal performance during the water transfer process.

RIGID STRUCTURE

Framework

When it comes to your water transfer printing needs, the Aqua Pro hydrographics tank not only excels in performance but also prioritizes your investment with its long-lasting stainless steel body, providing a corrosion-resistant solution that can handle the rigors of continuous use, day after day. The Aqua Pro line of tanks are constructed of 201 Stainless Steel. Experience the durability and reliability of the Aqua Pro and take your water transfer printing to the next level.

Enclosed Pump Area

To enhance safety and maintain a tidy workspace, the Aqua Pro hydrographics tank features an enclosed pump area. This design prevents accidental contact with the pump while keeping it protected from external factors. The enclosed pump area contributes to a secure and organized environment, allowing you to focus on the task at hand.

INTERNAL FEATURES

Spray Bar

Achieving consistent and uniform water spray is crucial for rinsing the film after a dip is completed. The spray bar has precisely measured holes to give the user total control on making sure the water is uniformly distributed across the entire tank. This also makes sure you get the correct amount of water flow to help in removing excess film and getting you ready to dip quicker for the next job.

Stainless Piping

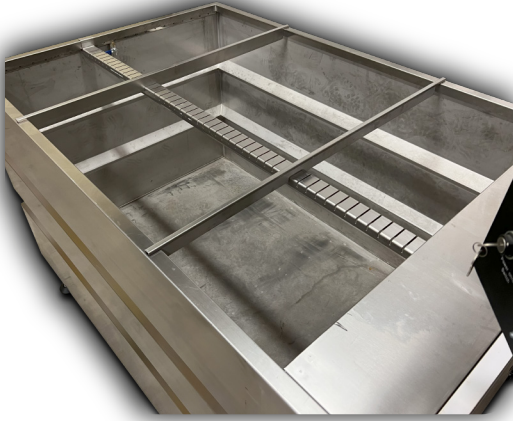

Durability and longevity are essential in the Aqua Pro hydrographics tank, which is why it is constructed with high-quality stainless steel piping beneath the tank. This robust piping system not only ensures reliable water circulation but also offers exceptional resistance to corrosion and wear, providing years of dependable service. Efficient maintenance and cleanup are made effortless with the inclusion of drain valves in the Aqua Pro hydrographics tank. These valves allow quick and easy drainage of the tank, making it simple to change the water or clean the tank between projects. Say goodbye to cumbersome cleanup routines and hello to a more streamlined workflow.

Enclosed Film Tray

Our custom-built filter tray is crafted with a hidden cover to a better appearance. Engineered to perfection, the filter tray effectively captures and filters out debris, tape, and excess trash from the dipping process. Cut holes throughout the tray enhance water flow and filtration.

Film Divider System

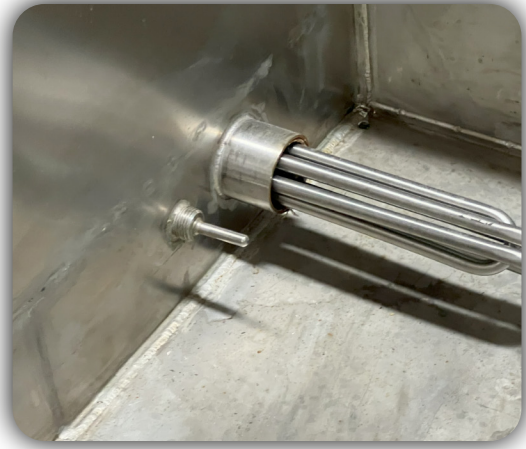

For efficient film containment, the Aqua Pro hydrographics tank includes film dividers. These dividers make sure you always have the right size to fit almost any size film you cut to lay on the water. This helps to eliminate waste and improves overall efficiency while dipping.

ELECTRONIC FEATURES

Control Panels

Control and safety are paramount in any professional setting, and the Aqua Pro hydrographics tank excels in both aspects. The full working control panel grants you complete command over the tank's operations, enabling you to adjust temperature, monitor water circulation, and control the soak time. Additionally, the emergency shut-off feature provides peace of mind, allowing you to quickly stop the process if necessary.

Recirculation Pump

At the heart of the Aqua Pro hydrographics tank lies a powerful recirculation pump. This high-performance pump ensures that the water is constantly circulated, creating an optimal environment for the water transfer process. It guarantees quick and easy removal of excess film after each dip.

Standard Heating Elements

Temperature control is crucial for achieving consistent and reliable results. The Aqua Pro hydrographics tank is equipped with advanced heating elements that allow precise regulation of water temperature. With the Aqua Pro's heating elements, you can trust that it will maintain the desired temperature throughout your water transfer printing projects. Its robust construction and efficient design contribute to its extended lifespan, allowing you to rely on the Aqua Pro for years of uninterrupted service.

Warranty

We stand behind the quality and reliability of the Aqua Pro hydrographics tank. That's why it comes with a 1-year warranty. This warranty gives you peace of mind knowing that we are committed to providing exceptional support and addressing any potential issues that may arise during the warranty period.

TANK PACKAGE

PACKAGE INCLUDES:

OVER \$3,000 IN VALUE

- 1 Gallon of Liquid Concepts Activator
- 50 Meters of Traditional films
- 1 Yr Full Coverage Warranty
- Activator and Primer HVLP Startingline Devilbiss Gun Kit
- Devilbiss Pro Lite HVLP Paint Gun
- Filter Media For Tank
- 1 Box of Gloves
- \$200 Chemical Credit
- Startup 2 Day Training for 2 people at our facility
- 10 White Speed Shapes
- 10 Black Speed Shapes
- Training Instruction Manual
- 3M PPS Cups System (Dispensers, Lids & Liners)
- PPS Cup Adapter for Devilbiss Pro Lite
- 10% OFF all future product purchases
- Access to our Online Liquid U Training
- Technical Support for a LIFETIME!
